Linglong launches all new Crane Master and Mix Traction tyres for improved performance

Hannover, Germany, April 9, 2024– Linglong Specialty Tyres has launched the all new Crane Master and Mix Traction series. These offer improved performance, stability, wear resistance and longevity for operators of mobile cranes and heavy duty dumpers.

The new Crane Master tyres are specifically designed for heavy mobile cranes. With their multi-axle design and large weight, these cranes still need to be able to travel at speed when in transport mode and navigate tight corners, which puts a lot of stress on the side walls. Thanks to improvements in the irregular wear patterns and reinforced ribs connecting with circumferential blocks, the new Crane Master tyre offer the highest overall performance on highway. In addition the non-directional tread design contributes to fuel efficiency, while guaranteeing a smooth and comfortable ride for the driver.

Linglong's Mix Traction tyres are aimed at heavy duty dumpers operating in the challenging environment of quarries and surface mining. Thanks to its improved self-cleaning tread design and strong carcass, the new tyres provide excellent traction and stability on soft and muddy ground, even under heavy load conditions. The deeper tread depth and newly developed compound ensure exceptional wear and cut resistance.

“We have invested a lot of engineering time and effort in improving the performance of our Crane Master and Mix Traction tyres,” says Jean-Paul Spijker, Director Sales and Marketing Specialty Tire Europe at Linglong. “In these new series we have incorporated a lot of the feedback from the market, both from operators and drivers. Thanks to the new design, strong carcass and improved compounds, we can now offer some of the best performing mobile crane and dump truck tyres at very competitive rates, for the OEM and replacement markets.”

About Linglong Tire

Founded in 1975, Shandong Linglong Tyre Co., Ltd. is a leading Chinese tyre manufacturing company, with production sites in China, Thailand, and Serbia. Furthermore, Linglong has R&D centres in Zhaoyuan, Yantai, Jinan, Beijing and Shanghai in China, as well as North America and Germany,

developing cutting-edge technology. The company's products are exported to 173 countries across the world, covering Europe, the Middle East, the Americas, Asia Pacific and Africa, and providing OEM service for over 60 well-known global automakers. For more information:
